What I Learned Today

Screenshot this and post it. It's designed to be shared as-is.

I let AI roast my LinkedIn profile today. Here's what changed:

31 → **86**

PROFILE STRENGTH / 100

Top 3 mistakes I was making:

1. Headline said my job title ("Student"), not my value — invisible in recruiter search
2. My best proof (500+ LeetCode, a real ML project) was buried below the "see more" fold
3. Zero numbers anywhere — every bullet read like a task, not an achievement

💡 The #1 thing that made the biggest difference: adding real proof (numbers + project outcomes) into the first two lines of my About section — before "see more."
